Use Safecoat®
DuroStain
from AFM to
protect and enhance
the richness and
warmth of wood without
exposing your
family to
toxic chemicals.

Safecoat. DuroStain uses natural mineral pigments and not dyes, which create superior clarity and a "professional" quality finish. Enjoy the beauty of fine woodworking and protect your family too.

For over 20 years AFM's coatings, sealers, cleaners and specialty products have been developed with your health in mind.

Safecoat® is formulated without formaldehyde and other toxic ingredients, has almost no odor upon application and is odor free once cured.

The finish of stained wood is actually a blend of several factors - wood species, the wood's natural color and texture, the color of the stain, lighting and method of application. Although these are photographs of the stains as they appear on red oak wood samples, it is not possible to reproduce with printing ink the actual color and texture of the stain. In order to determine the stain's final effect, test the color on a sample of the wood to be finished.
